DEPLOYMENT · ACTION REQUIRED

# Publishing the platform on 193cc.co.uk

The short list of information we need from the Consortium to connect your domain and take the members' platform live.

**Prepared for:** 193 Countries Consortium Ltd · **Prepared by:** KRONEUS ZTS Security Ltd · 22 July 2026

## 1 In brief

The membership platform is already built and running on a secure host. To display it on your own domain, **193cc.co.uk**, we simply need to connect the domain — which requires a few details and brief access to your domain's DNS settings. Nothing about the platform itself changes. Providing the items below **today** allows the site to be live on your domain in time for the event.

## 2 What we need from you

| # | Item | Why it's needed |
|---|---|---|
| 1 | **Domain registrar / DNS host** where 193cc.co.uk was bought / is managed — e.g. GoDaddy, IONOS, 123-reg, Namecheap, Cloudflare | Tells us which control panel the settings go in |
| 2 | **Access to the DNS settings** either a login to that panel, or a contact on your side who can add two records we provide | Someone must add the two records that point the domain to the platform |
| 3 | **Is the domain already used for email or a live website?** (yes / no — if yes, which provider) | So we protect your existing email and site and change nothing we shouldn't |
| 4 | **Preferred web address** 193cc.co.uk, www.193cc.co.uk, or a subdomain such as portal.193cc.co.uk | Determines which record we set |
| 5 | **A DNS contact** — name, phone & email | So we can coordinate quickly if anything needs confirming |

## 3 Exactly what will be changed

For full transparency: we only **add** the two records below. We do not delete or alter anything else on your domain.

| Type | Name / Host | Value | Purpose |
|---|---|---|---|
| A | @ (root) | 76.76.21.21 | Points 193cc.co.uk to the platform |
| CNAME | www | cname.vercel-dns.com | Points www.193cc.co.uk to the platform |

The secure HTTPS certificate (the padlock) is then issued automatically — no cost, nothing to install.

## 4 Two important notes

**Your email is safe.** If the domain currently sends or receives email, those settings (MX records) are left completely untouched — that is exactly why we ask question 3. Connecting the website does not affect email.

**Please provide this today.** Domain changes can take from a few minutes up to a few hours to take effect across the internet, so the earlier we receive access, the safer the timing for the event.

**You don't need to email us passwords.** You can add the two records yourself from the details above, or give us temporary access to the DNS panel — whichever you prefer. Passwords should never be sent in plain text.

## 5 What happens once you provide it

1. We add 193cc.co.uk to the hosting dashboard.
2. The two records above are added at your DNS provider.
3. The HTTPS security certificate issues automatically.
4. The platform goes live on your domain — typically within **1–3 hours** of the records taking effect.

## 6 Quick reply form

You can simply fill this in and send it back.

**1. Domain registrar / DNS host**

_____

**2. How we'll access DNS**

☐ Login provided ☐ We'll add records you send ☐ Temporary access granted

**3. Domain currently used for email or a website?**

☐ No ☐ Yes — provider: _____

**4. Preferred web address**

☐ 193cc.co.uk ☐ www.193cc.co.uk ☐ portal.193cc.co.uk

**5. DNS contact**

Name _____ Phone _____ Email _____
